

EdgeTab

BlackBerry's „Productivity Edge“ – rebuilt for any Android phone

Miss BlackBerry's pull-out edge panel? **EdgeTab** recreates it from scratch – original code, not a single line from any BlackBerry app, only open Android interfaces. A slim handle at the screen edge opens a panel of freely configurable cards: inbox (with reply, mark-as-read & delete like the original), **SMS & calls**, calendar, contacts, tasks, notes, app widgets, grouped shortcuts, media controls and “Active Frames” – one swipe away, without leaving the app you're in.

Android 10+

Inbox with inline reply

“Active Frames” card

What's inside

- Edge handle (left or right), freely adjustable height, position, width, transparency.
- As many re-orderable cards as you like – each nameable, with its own icon.
- Inbox from chosen apps (BlackBerry Hub, Telegram, Signal ...) with real reply, mark-as-read and delete – straight from the notification.
- **New: SMS & calls** as their own cards and in the inbox – SMS as an expandable conversation with inline reply, call colours (green/red/blue), each with search.
- **New: search** in the inbox; “Search in Sucher” opens a full-text search across everything.
- Calendar, contacts, tasks (JTX Board), notes, app widgets, media controls.
- “Active Frames” tile card and automatic service restart after a crash.
- **New:** a dedicated permissions card (explains every permission, reminds you if one goes missing) and backup **incl. data** as a single file.

A detailed, illustrated guide is available separately. Source & APK: github.com/8818freak/EdgeTab · All screenshots from real use – personal names and content have been redacted.
